Continuation of 2. NOTE: With respect to independent claims 1 and 5, the applicant argues (pg. 10 last paragraph) that Saito does not teach "forwarding Internet packets from one edge router toward a destination host based solely on a global Internet address". The applicant admits Saito teaches global Internet addresses. The applicant claims Saito assigns a global IP address to each terminal and thus delivers with no need for forwarding. The applicant fails to distinguish the difference between the process of 'forwarding' from the

teachings of Saito. The applicant states, "If every terminal had a unique IP address, forwarding is no longer necessary and only routing is

required." The examiner maintains in the claims that 'forwarding' can be interpreted as routing. .
